Subject: List of Topics for Tomorrow's Technical Conference Call

Kristine-

Per EPA's project schedule, the LWG is to present its list of significant concerns with EPA's revised FS Sections 3 and 4 by September 8, and its complete list of FS comments by October 8. The objective behind asking the LWG to present its list of significant concerns by September 8 is to accommodate some vetting of these with EPA prior to EPA's issuance of a conceptual plan, which is expected on or before September 18.

Because EPA requested the LWG indicate any significant concerns as early as possible, the LWG is providing the following list of initial significant concerns now so that we discuss them with the EPA team during tomorrow's technical conference call. This list represents some of the initial significant issues we have identified with the revised FS. The LWG will likely expand upon this list as we continue our review of the document, and will provide the final list of significant concerns by close of business September 8.

1. **Principal Threat Waste**
2. **Technology Assignments**
3. **Incomplete Evaluation of Alternatives and Effectiveness**
4. **RCRA Hazardous and Other Waste Designations**
5. **Remedial Action Levels**
6. **Riverbanks**
7. **Risk Inconsistency**
8. **Evaluation of Short-Term Impacts**
9. **Use of Sheet Piles**
10. **Lack of Integrated Designs**
11. **CDF acceptance criteria changes**
12. **Perfunctory Alternative Screening**

As we discussed earlier today, it is unlikely that we'll get through this entire list during tomorrow's 2-hour conference call. Therefore, we will coordinate with you to arrange one or two additional conference calls to take place prior to September 15.

Thanks,

Jim McKenna
